

PRESS RELEASE

OceanServer Technology, Inc. Awarded Contract for two AUVs by the Naval Oceanographic Office

Fall River, MA –September 21, 2007 - OceanServer has been awarded a contract to deliver AUVs to the Naval Oceanographic Office for use in an evaluation program involving a variety of sensor payloads for near-coastal hydrographic applications. The systems will be based on the COTS Iver 2 AUV, equipped with side scan sonar and chemical sensors for monitoring water quality parameters. Each system will include a GUI-based Mission Planner for developing missions and analyzing collected data sets. OceanServer will also provide user training and limited operational support during the evaluation period.

About Iver2

The Iver 2 Autonomous Underwater Vehicle is a modern, low-cost COTS-based system, with a simple, and unique operational approach to conducting surveys, soundings, search and rescue and research projects in the lakes, rivers and near-coastal waters.

About OceanServer Technology

OceanServer provides OEMs with innovative power solutions, sensors and robotics for a variety of applications. OceanServer Technology is a privately held company headquartered in Fall River, Massachusetts.
