

NEWS FOR IMMEDIATE RELEASE

OceanServer Delivers Iver2 AUV to Aselsan, Inc.

Fall River, Massachusetts - June 5, 2009 - OceanServer Technology announced today that it has delivered an Iver2 Autonomous Underwater Vehicle (AUV) to Aselsan, Inc. of Ankara, Turkey. Aselsan, a major research and development organization specializing in Defense Systems Technologies, Guidance and Electro-optics, Electronic Warfare, and Communication System Technologies, will use the Iver2 AUV for general R&D purposes and for ongoing Unmanned Underwater Vehicle development activities. Aselsan has a long track record of developing sophisticated products and technology-based solutions throughout the world for both military and professional applications.

The Iver2 is a low-cost, simple to operate AUV system that incorporates a truly 'open' software architecture and defined hardware interfaces. This unique design has enabled OceanServer to carve out a very strong position in the Research & Development space for Autonomous Underwater Vehicles. Common payloads include GPS navigation, CTD probe, altimeter, side scan sonar, and a variety of optical and chemical water quality sensors.

Each system includes the OceanServer VectorMap Mission Planning and Data Presentation tool, which provides geo-registered data files that can be easily exported to other software analysis tools. The VectorMap program can input any geo-referenced chart, map or photo image, allowing the operator to intuitively develop missions using simple point-and-click navigation.

About OceanServer

OceanServer provides OEMs with innovative power solutions, sensors and robotics for a variety of applications. OceanServer's products are designed to be cost effective and easy to integrate in equipment. This allows customers to dramatically reduce time to market and speed new product introductions for real-world applications. OceanServer Technology is a privately held company headquartered in Fall River, Massachusetts.
